ARECA PALM **Chrysalidocarpus lutescens**

Areca Palms are one the most popular of all palm varieties. This palm is native to Madagascar. It can grow very large there but here indoors it will only get about 10ft,

Arecas can not tolerate hot south sun. They do their best in an east or west window.

Never let the soil to dry out completely but don't over water it either.

You must watch it closely in a very dry non humid area. Because they are susceptible to spidermites. I would keep a natural or organic houseplant spray around just in case.

It loves humidity. Use a humidity tray with this plant.
