

# Patty's Plants

## CAST IRON PLANT (*ASPIDISTRAS*)

**Light:** Keep your Aspidistras in low or medium light. They tolerate artificial or existing room light, near a north, east or west window.

**Water:** Water occasionally, but thoroughly. Let the soil dry to the touch to a soil depth of 1/2" to 1-1/2".

**Fertilizer:** Fertilize every two weeks in spring and summer.

**Temperature:** Aspidistra prefer cool to medium temperatures, 50-70 degrees and can tolerate temperatures as low as 45 degrees at night.

**Humidity:** Average humidity, 30%, is best for foliage, but it will tolerate lower humidity.

**Potting Soils:** Plant in large containers or planters. Use a good soil mix and add worm castings to give the plant natural nutrients.
